

Service Release Notes

Version 26.2.1 – 7 April 2026

Modules Affected

[Core Platform](#), [Academic Reports](#), [Activities](#), [Analysis](#), [Attendance](#), [Attendance PxP](#), [Curriculum Reference](#), [Enrolments](#), [Fees and Billing](#), [Interviews](#), [Staff Absences](#), [Student Profiles](#), [Timetables](#), [Wellbeing](#)

Core Platform

[improved] Subscribe users to Sentral status page alerts via email

Sentral Setup | Enterprise Setup | General | Manage Users or Sentral Setup | Manage Users

You can now subscribe users to Sentral status page alerts, so important system incidents and maintenance updates are delivered directly via email.

- Anyone with Manage Users access can subscribe or unsubscribe up to two users.
- Alerts are sent when updates are published to the Sentral Status Page, improving transparency and keeping you informed without needing to check manually.

Academic Reports

[fixed] Academic Reports completion status

You will now see Academic Reports correctly display as complete when all data and sign-offs are finished. This resolves inconsistencies caused by links to an old student schema and duplicate entries, so report status is accurate across all status pages and classes.

[fixed] Secondary achievement scales print correctly in Achievement Breakdown

You will now see secondary achievement scales display and print correctly for Outcomes and Strands in the Achievement Breakdown component.

[fixed] Teacher names now print correctly on Summary Reports

This resolves an issue where some reports showed incorrect teachers due to assignment mismatches.

Activities

[improved] Activity cycle dropdown only shows relevant cycles

Activities | Activity

You can now select from a more relevant list of cycle instances when viewing an activity, reducing clutter and making it easier to navigate past activity data.

- Past cycles display only if at least one student is assigned or the approval workflow has started.
- All current and future cycles continue to display, even if no students have been added yet.

[improved] Clearer messaging after approval workflow changes

You can now see a dashboard message explaining that activity notifications may differ because the approval workflow has been changed.

[fixed] Publish Permissions Only activities without a payment schedule

You can now publish Permissions Only activities without selecting a payment schedule template.

[fixed] Approval forms status now move out of 'Pending' when approval is completed

Approval form statuses will now update correctly as approvals are completed. This also ensures completed approval requests no longer revert to 'Pending'.

[fixed] Manage Permission Responses now save reliably with Show All pagination

Selections made when using the Show All pagination option will now save correctly for activities with more than 830 students.

Analysis

[improved] NAPLAN WA Importer supports Proficiencies

Analysis | Setup | Import | National Assessment Program - Literacy and Numeracy (WA)

You can now import WA NAPLAN scores and proficiencies, aligning with Western Australia's move from bands to proficiencies.

Attendance

[improved] Badge counter for absence responses

School Attendance | Notifications | Responses

You can now see a badge counter on the menu item for Absence Responses, so you can see if there are any new responses that are pending acceptance.

[fixed] Historical medical certificates now display in attendance history

You can now view medical certificates for previous years' absences in a student's attendance history.

[fixed] Multiple travel changes on the same day

You can now make multiple travel changes for a student on the same day, allowing both 'to school' and 'from school' route changes without one overriding the other.

[fixed] All absence responses now display correctly

This resolves an issue where the final page of the results on the Responses page was not visible.

Attendance PxP

[fixed] Unmarked roll notifications are sent to class teacher

Unmarked roll notifications are now sent to the teacher assigned to the class for that day, rather than only the primary class teacher. This ensures the right staff member is alerted to submit the roll.

Curriculum Reference

[improved] New NSW Digital Curriculum outcomes for Years 11 and 12

Curriculum Reference | NSW AC Digital Curriculum 11-12

You can now access updated curriculum outcomes for NSW Digital Curriculum subjects in Years 11 and 12.

New outcomes added for: Ancient History, Biology, Dance, Drama, Economics, History, Law and Community, Legal Studies, Music, Music 2, Music Extension, Music Life Skills, and Physics.

Enrolments

[fixed] Non-Government School Census export now includes withdrawn and alumni students for past dates

The Non-Government School Census export now accurately includes students with a status of Withdrawn or Alumni when they fall within the configured census period.

[fixed] Staff email updates now sync correctly to Sentral Setup

Staff email and username updates made in Enrolments will now flow correctly into Administration Data in Sentral Setup.

Fees and Billing

[improved] Validation for parent contribution terminology (NSW government schools only)

You now see a validation message that prevents restricted parent contribution terms from being saved in text visible to parents, in alignment with the NSW Department of Education's guidance on parent contributions.

- Blocked terms: fee, fees, invoice, invoices, invoiced, billing, bill, bills, levy, levies, charge, charges
- An error message appears if restricted terms are entered, and changes will not be saved

Interviews

[fixed] Parent teacher interview notifications now show booking opening time

Parents will now see the scheduled booking opening time in parent teacher interview notifications.

Staff Absences

[fixed] Relief teacher absence records

You can now see all absence records linked to the relief staff displayed on the relief teacher record page.

Student Profiles

[improved] Access control for Enrolments Documents (schools using Enrolments only)

Sentral Setup | User Accounts | Manage Permission or Enterprise Setup | General | Permissions

You can now control who can access a student's Enrolments Documents page, so sensitive enrolment documents are only visible to the right users. Inactive document categories are now hidden, ensuring only relevant documents are shown.

[fixed] Executive-only meeting minutes now respect access permissions in Profiles V2

You will no longer see Executive-restricted meeting minutes in Profiles V2 unless you have been granted the relevant permission in the ACL controlling Executive meetings.

Timetables

[improved] View and manage teachers directly in Timetables

Timetables | Setup | Teachers

If you manage your timetable through a file upload, you can now:

- Add and edit teachers in the Timetables module
- Map teachers to existing users and assign them to classes.

This helps manage mid-term staff changes without having to re-upload timetable files.

[performance] Student Timetables loading improved

Wellbeing

[fixed] Wellbeing levels now auto-reset correctly across calendar years

Students with wellbeing levels set to automatically expire in the next calendar year will now be returned to the default no-level state when the year changes.

[fixed] Incident category hover text now only shows active details

The hover text for Incident Categories now matches what is visible in the incident type view.

[fixed] Wellbeing incident reports now include types and sub-types

When running a Wellbeing incident report that includes a mix of incident types and sub-types, the report will now return all relevant incidents. This resolves an issue where reports previously only included incidents with sub-types.

[fixed] Year selection in Wellbeing date picker

You can now select dates from previous years in the Wellbeing date picker.

[fixed] Victim and witness breakdown in student wellbeing summary

You can now view the victim and witness incident breakdown in a student's wellbeing summary without an error message.
