

Service Release Notes

Version 26.6.1 – 21 September 2026

Modules Affected

[Academic Reports](#), [Analysis](#), [Attendance](#), [Attendance PxP](#), [Daily Org](#), [Dashboard](#), [Enrolments](#), [Health](#), [Interviews](#), [Messaging](#), [Plans](#), [Portal](#), [Portal Console](#), [Resource Booking](#), [Staff Absences](#), [Student Profiles](#), [Timetables](#), [Wellbeing](#)

Academic Reports

[fixed] CASES21 export for Prep students with a 'D' result for Mathematics 2.0 (VIC schools only)

Prep students with a 'D' result for Mathematics 2.0 are now correctly included in the CASES21 version 11 export.

[fixed] Publishing reports no longer sends duplicate feed notifications

You will no longer see multiple feed notifications sent when the Publish button is clicked more than once during report publishing.

[fixed] Course result rounding now matches reporting settings

You will now see course results rounded consistently between Markbook imports and summary reports when reporting periods are configured not to display decimal places.

[fixed] Achievement components styling

You will now see text alignment and styling applied consistently in Modern Achievement Breakdown and Achievement Tally components. This means report layouts now display as configured.

Analysis

[fixed] Improved support for QLD NAPLAN import header variations

You can now import QLD NAPLAN files that use the updated 'FFPOS' header in place of the previous 'Visa' header, along with variations in 'Grammar and Punctuation' formatting. This ensures NAPLAN data imports successfully regardless of whether headers use 'and' or '&', reducing import errors and the need for manual file adjustments.

Attendance

[fixed] Sibling attendance data now matches overall attendance values

You will now see consistent attendance percentages between the School Attendance Overview and the sibling attendance section in student profiles.

[fixed] Student travel flags now show for 'From Route' services

You will now see student travel flags from both 'To Route' and 'From Route' services to ensure accurate visibility of after-school travel arrangements.

[fixed] Unsubmitted roll notifications for inactive users

Unsubmitted roll notifications from School Attendance are no longer sent to inactive users to ensure attendance reminders are delivered only to active staff.

[fixed] Inactive student filtering now shows only relevant invalid attendance data

You will now see only invalid attendance data related to inactive students when using the inactive student filter in Invalid Data Cleanup. This ensures attendance records are filtered correctly and attendance issues are easier to identify and resolve.

[fixed] Absence response exports

You will no longer see blank fields in 'All Responses' exports when exporting absence responses. Absence response exports now generate with complete and correctly formatted data, such as student name.

[fixed] Evacuation Summary pagination no longer leaves unnecessary gaps

Student records are no longer unnecessarily pushed to a new page. This means students are now displayed more consistently across pages in the Evacuation Summary.

[fixed] 'Add to Today's Roll' now updates travel rolls correctly

You can now add eligible students to today's travel roll using the 'Add to Today's Roll' action. This ensures travel rolls are updated as expected and reduces manual administration work.

Attendance PxP

[fixed] Consistency when creating absences from overall attendance

You will now see more consistent results when using the 'Create absences from overall attendance' setting in Class PxP. This ensures absences are created correctly regardless of the mix or volume of absence records.

[fixed] Guard class selections now save correctly

Guard classes now retain their selected state when marked as unchecked. This ensures class selections are saved accurately and reduces data entry errors.

[fixed] Non-conflicting incursions no longer trigger attendance conflicts

You will no longer see attendance conflicts raised for incursions that do not overlap with scheduled class periods. This ensures valid PxP rolls can be submitted without incorrectly affecting school attendance records.

Daily Org

[fixed] Daily Org publishing now completes timetable synchronisation

Changes published from Daily Org now successfully synchronise to Timetables and PxP. That means timetable updates are applied as expected without the need for manual intervention.

Dashboard

[fixed] Improved reliability of broadcast notices

You should now see broadcast notices displayed more consistently after login. We've made improvements to reduce rare situations where notices may not appear for some staff users.

[fixed] External website content widget

Dashboard | [edit Dashboard](#)

The external website content widget is now editable and loads content correctly.

Enrolments

[new] Future Enrolment Listing report

Enrolments | Export | General

A new Future Enrolment Listing report PDF is now available to showcase student numbers for a future year. The report PDF can be generated in two versions - Year Level or Students.

- Year Level option will result in a PDF that outputs the student counts per year level for a future year.
- Students option will result in a PDF that prints each student's name per year level that is assumed enrolled into the future year.

[fixed] Non-global student flags

Profiles | student

You will now see the correct non-global flag displayed for students based on the school the flag belongs to. This fix ensures student flag information remains accurate when viewing alumni enrolments across multiple schools.

[fixed] Enrolment status filter on the Manage Students page

Using the enrolment status filter on the Manage Students page to look up enrolled-active students now locates students with the correct matching enrolment record.

Health

[fixed] Review button for pending medical amendments

Health | Medical Amendments | Pending Requests

Clicking the Review button for a pending medical amendment should no longer result in an error.

[fixed] Gender icons in emergency/health care plan

Health | student | Emergency Care Plans / Health Care Plans | Edit Plan

The 'Consulted With' section of an emergency care or health care plan no longer displays incorrect gender icons.

Interviews

[fixed] 'View Bookings' button display

Interviews | interview session card | View Bookings button

The 'View Bookings' button no longer displays for non-admin users. Previously non-admin users would get an error message when selecting the button.

[fixed] Student name display in confirmation email

Interviews | Confirmation Email

The confirmation email for an interview no longer prints the student's name multiple times, if multiple class bookings for the student were made at once.

Messaging

[fixed] Edit Group button icon

Messaging | Address Book | Groups | Edit button

The edit icon now properly displays for the Edit Group button.

[fixed] Inactive students excluded from student merge fields in messages

You will no longer see messages generated using details from inactive student records when sending a message to an individual contact that contains student merge fields.

Plans

[fixed] Completed student plans now clear automatic flags correctly

Automatic flags are now removed automatically when custom student plan types are marked as completed.

[fixed] Student plan indicators now update when outcomes change

You will now see indicators update correctly when a different outcome is selected in a student plan. This ensures the displayed indicators remain aligned with the selected outcome.

Portal

[fixed] Staff-only broadcasts respect active staff status

Portal Console | News Feed

Staff-only news feed broadcasts are no longer delivered to users whose linked staff record is inactive or has ended.

[fixed] Medical amendments support existing comment formatting

Parent Portal | Medical Information

You can now submit medical information amendments when immunisation record comments contain special characters.

[fixed] Notification status now displays all recipients correctly

Portal Console | News Feed

You will now see the correct total number of recipients in Notification Status for news feed items, including broadcasts sent to large recipient groups.

Portal Console

[new] Recipient selection after publishing a Newsfeed

Manage Portal Feed | All Feed (Published) | Edit

School Users can now change recipient selections after a newsfeed is published, so you can add or remove groups without having to create a duplicate post.

Resource Booking

[fixed] Deactivated user accounts resource booking notifications

Deactivated user accounts should no longer be retrieved for notifications about a resource that used to be linked to the deactivated user.

Staff Absences

[fixed] Sensitive absence data ACL

Staff Absences | Daily Absences | Staff Absence Record

Leave types are no longer displayed in the heading of staff absence records to staff when the 'Can view sensitive absence data' access control permission restricts access to this information.

Student Profiles

[improved] Household section

Profiles V1 | student | Summary

Non-residential household information is now replaced with dedicated section about households that shows multiple types of address per household i.e. physical address, mailing address and billing address.

Timetables

[fixed] Timetable exports now use clearer class identifiers

You can now export timetables using the class name as the primary identifier, with the previous external identifier displayed in a separate column. This makes exported data easier to understand and interpret.

[fixed] Timetable export now aligns student and class data correctly

Class information is no longer exported into the student ID column when exporting timetables.

[fixed] Event lesson start times no longer display incorrect characters

You will no longer see an extra '}' character displayed next to Event lesson start times in Timetables.

[fixed] Timetable layout with holiday labels

Holiday labels no longer push day headers out of alignment in timetable views.

Wellbeing

[fixed] Awards export

Schools with a large number of award records no longer encounter an error when exporting awards in Wellbeing.

[fixed] Parent notification rules no longer require a student type selection

You will no longer need to edit and resave existing parent notification rules when no student type is selected. This reduces administration workload for schools that do not use witness or victim student types.
