Service Release Notes

Version 26.7.1 – 2 November 2026

Modules Affected

Academic Reports, Attendance, Attendance PxP, Core\Data Sync, Daily Org, Enrolments, Health, Interviews, Markbook, Report Writer, Staff Absences, Timetables

Academic Reports

[new] 2027 Victorian Department of Education report templates

Academic Reports | Setup | Layout | Report Templates | New Report Template | Use a Template

You can now access 2027 academic report templates aligned to anticipated Victorian Department of Education reporting requirements, so you can prepare for upcoming reporting changes and streamline report setup for the 2027 school year.

[fixed] Grade result exports now align subject and grade data correctly

You will no longer see grades shifting into the subject column when exporting grade results across multiple subjects. This ensures grade data is exported in the correct columns regardless of differences in grading structures.

[fixed] Comment components now display dot points correctly

You will now see dot points displayed correctly in report components that show comments when inline styling is enabled. This ensures comment formatting is preserved as intended.

Attendance

[fixed] STATS attendance exports now support half-day attendance values

Attendance Days are now exported with the correct decimal values, including '.5' where required by the STATS specification.

[fixed] Sick bay incursions now retain the original creator information

You will now see the original 'Created By' user retained when editing an existing sick bay record from the Incursions Register. This ensures audit information remains accurate, improving record integrity and providing clearer visibility of who originally created the record.

Attendance PxP

[fixed] Automatic absence notifications now trigger correctly for multiple absence reasons

You will now see automatic absence notifications sent as expected when a notification rule includes multiple absence reasons. This ensures configured notifications are delivered reliably, improving communication consistency and reducing the need for manual follow-up.

[fixed] Class PxP roll submissions no longer fail after partial absence updates

You no longer encounter an error when resubmitting a Class PxP roll after updating a student's partial absence details. This ensures rolls can be submitted successfully in complex attendance scenarios.

Core\Data Sync

[fixed] Improved Home Language sync accuracy (NSW government schools using the SIF NSW DoE SAIS integration)

Students' Home Language values now synchronise more accurately from ERN. This fix ensures the correct language is selected based on the language type and 'other language at home' indicator, helping reduce data inconsistencies and improve reporting accuracy.

Daily Org

[performance] Variation Calendar in Daily Org

The Variation Calendar now load significantly faster in Daily Org, particularly when viewing large numbers of staff absences and cover arrangements.

Enrolments

[fixed] Spelling error on medical advice form label

When School Medication is set to Yes, the label now correctly displays "Medical Advice Form Provided".

Health

[fixed] Deactivated users no longer receive Health medication alerts

Health medication expiry and stock alert emails are no longer being sent to deactivated users. This ensures sensitive student health information is only sent to active staff members, helping improve privacy, confidentiality, and compliance.

Interviews

[fixed] Conference mode bookings now display correctly in printed schedules

You will now see all bookings included in PDF schedules for interview sessions configured in Conference Mode, including multiple bookings within the same timeslot. This ensures printed schedules accurately reflect interview bookings displayed in Interviews.

Markbook

[improved] Additional field selection restored in Markbook

You can now choose which value is displayed in the additional field in Markbook, including options such as staff, student ID, exam ID or year. Your selection is remembered across sessions, so you can view the information most relevant to your workflow and more easily manage mixed classes.

[fixed] Markbook surname sorting now uses first name as a secondary sort

You will now see students listed in a logical order when sorting Markbook records by surname, with first name used as the secondary sort value. This ensures student lists are displayed consistently, making it easier to locate and manage student records.

Report Writer

[fixed] Wellbeing incident IDs now export correctly in Report Writer

Incident IDs are now properly included when reporting on Wellbeing incidents in Report Writer. This ensures incident records can be accurately identified and referenced.

Staff Absences

[fixed] Timetabled classes display in Staff Absences cover table

Timetable Setup | Timetabled Campuses enabled

You will now see timetabled classes displayed correctly in the Staff Absences cover table when Timetabled Campuses is enabled.

Timetables

[improved] Optional year-based class reference IDs for Timetable Solution imports

Timetables | Setup | Import Year as part of Class Ref ID

You can now enable an optional setting to include the current year in class reference IDs during TTS imports. This helps create unique year-specific class records, improving class matching accuracy and preventing current and historical classes from being linked to the same underlying record. Once enabled this setting applies from 2027 classes onwards.

[fixed] Timetable synchronisation no longer creates duplicate sync requests

Refreshing the page after selecting 'Synchronise Now' in Timetables no longer triggers additional synchronisations. This fix ensures only one synchronisation can run at a time, preventing duplicate requests and reducing the risk of synchronisations becoming stuck in a running state.
