Service Release Notes

Version 26.7.2 – 16 November 2026

Modules Affected

Academic Reports, Activities, Attendance, Interviews, Markbook, Staff Absences, Timetables, Wellbeing

Academic Reports

[fixed] Class import status messages now update automatically

The 'Active class imports in progress' message now automatically disappears once a class import has completed. You can navigate away from the page and return to see if the import is still in progress, improving visibility of import status and reducing confusion without needing to manually refresh the page.

[fixed] Report rollover errors display in the user interface

There are now clear status updates for report rollovers, including an in-progress notification and a visible error message if a rollover fails. This ensures rollover issues are easier to identify and troubleshoot during reporting period setup.

Activities

[fixed] Activity student details display for single-cycle activities

You can now view activity student details when an activity has only one associated cycle, even if the active cycle instance is inactive. This fix ensures activity information is displayed automatically without needing to manually update the URL, reducing confusion and improving access to activity records.

Attendance

[fixed] Automatic absences for part-time students on non-attendance days

Automatic absences are no longer created for part-time students on days they are not scheduled to attend. This ensures attendance percentages remain accurate, prevents students from appearing in unmarked attendance lists incorrectly, and reduces the need for manual attendance corrections.

[fixed] Approved travel change notifications for roll class teachers

Approved travel change notifications are now sent consistently to roll class teachers, including when notification rules are configured for both travel directions. This ensures staff are kept informed of approved travel changes, improving communication accuracy and reducing the risk of missed updates.

Interviews

[fixed] Restored 'Print all schedules with blanks' option

Interviews | Print All Bookings

You can now access the 'Print all schedules with blanks' option from the Actions menu when printing interview schedules. This ensures schools can generate schedules that include unbooked timeslots, improving visibility and supporting interview day planning.

[fixed] Prevent overlapping interview bookings for shared teachers

You are no longer able to create interview bookings for a teacher who is already scheduled for another interview at the same date and time. This fix ensures teacher availability is checked across all interview schedules and classes, so you can avoid booking conflicts and improve the accuracy of interview scheduling.

Markbook

[fixed] Markbook permissions now restrict access to authorised students only

You can no longer view or edit marks for students outside your authorised classes when working in Markbook. This ensures class-level permissions are applied consistently across all Markbook views, improving data security and preventing unauthorised changes to student records.

Staff Absences

[new] Record locations for staff absence cover

Staff Absences | Add or edit absence

You can now record an optional location for each cover arrangement, with location details also visible in cover information, the Dashboard and Staff Absences reporting. This helps staff quickly identify where classes, relief teaching and supervision arrangements are taking place.

[improved] Location information added to absence cover details

Staff Absences | Daily Absences

You can now view the cover location in the View Details screen for staff absences, so you can see all cover information in one place.

[improved] Clearer cover requirements and lesson cancellation status

Staff Absences | Daily Absences

You can now see whether cover is required and when a lesson has been cancelled in the View Details and View Covers screens, so you can more accurately understand absence coverage without needing access to the Cover Table.

[improved] Select or deselect all cover requirements

Staff Absences | Add or edit absence

You can now select or deselect all Cover Required? checkboxes at once, so you can update cover requirements for multiple periods more efficiently.

[fixed] Cover details visibility for staff absences users

Enterprise Setup | Permissions | Manage Permissions | Staff Absences Setup

You can now view 'Cover Details' from the Action menu in the Staff Register (Daily Absences) when you have access to the Staff Absences module. This lets you view absence cover arrangements without requiring additional permission changes and ensures that users with 'Can access staff absences module' set to Allow can access the related cover information as expected.

Timetables

[fixed] Timetable synchronisations

Timetable synchronisations now complete more consistently, even when large volumes of daily timetable data are being processed. This ensures timetable changes are applied successfully, reducing data mismatches and improving the reliability of synchronisation between systems.

Wellbeing

[fixed] Student associations in copied wellbeing incidents (NSW government schools only)

Student data is no longer linked to the wrong incident when copying suspension or other wellbeing incidents. This ensures copied incidents create new, independent student records.
