

Service Release Notes

Version 25.0.1-p1
Release date 11/2/2025

Health

Issues resolved

- **Reports: The names for emergency contacts were not printed in the PDF reports for SA EDSAS schools**
- **Medical: Anaphylaxis indicator was not set for certain students**
Data from CASES21 didn't specify certain students as anaphylactic as the medical data for anaphylaxis was not spelt in a way that matches anaphylaxis. Sentral has relaxed slightly the matching criteria for identifying a student that is anaphylactic.

Messaging

Issues resolved

- **Messages: SMS replies from Kiosk SMS notifications did not properly display as responses within Messaging | Outbound Messages**
- **Messages: When composing an SMS message, the cursor would initially be placed and stuck halfway down the message text box**

Sentral Setup

Issues resolved

- **Classes: When managing student assignments to academic classes, future students could not be assigned to an academic class**

Version 25.0.1-p2
Release date 12/2/2025

Sentral Setup

Improvements

- **Roll Classes: The 'No Roll Class' roll class is now not editable to ensure its intended usage for Sentral's logic with processing students that don't belong to a roll class**
The ability to rename or set overrides or deactivate/reactivate 'No Roll Class' has been removed to ensure special logics surrounding the inbuilt roll class can be kept operational to process students who don't currently belong to a roll class. For NSW DoE schools this is also important to ensure syncing with NSW DoE systems remains functional as 'No Roll Class' works differently with NSW DoE compared to other school created roll classes.

Student Profiles

Issues resolved

- **Flags: The Filter for bulk managing Manual Flags was not showing student results when the filter was used**

Version 25.0.2
Release date 3/3/2025

Academic Reports

Issues resolved

- A Sentral exception error was generated when attempting to view a student via a class data entry page
- When a custom additional grade was added to a faculty schema, hovering over the additional grade displayed 'Effort' instead of the custom text
- The italics formatting button did not always work when creating comments
- Student Full Name merge field was not capitalising first names containing hyphens correctly on printed reports
- Staff Signature Image component was not printing teacher signatures in the correct order
- When generating more than 20 reports and using a custom border, the border would continue to double in size
- An error occurred when exporting the Student Grade Distribution report using the Group by Strands option

Analysis

Issues resolved

- **The grades used in Academic Reports were not displaying correctly in Analysis**
A new setting for schools to select the scales they want to use has been added in Analysis Setup | Academic Reports Settings | Select the Grading Scale to display. These scales come from the Sentral setup area.

Attendance PxP

Issues resolved

- **An error occurred when performing a search in the Bulk Manage classes screen**
Class PxP | Administration | Bulk Manage Classes
- **Composite classes were not sharing lesson plans, requiring data to be entered twice to ensure visibility**
For composite classes, lesson plans entered on one class will now display on all other related classes
- **An error occurred when attempting to view a roll for a class on a different campus**
- **Instead of displaying the conflict screen, entries in PxP were overwriting explained absences added to School Attendance via Notifications | Responses**

Enrolments

Issues resolved

- **Search:** Users using the top right search bar would at times be unable to locate a student with a surname that contained 2 words
- **Staff:** Certain inactive staff employment history records were still displaying on the UI when it should be hidden
- **UI:** Certain contact names shown in the Contact tab of the View Details popup showed special characters that should not be visible

Fees and Billing

Improvements

- **Xero Sync: Added an option to automatically archive the linked contact in Xero for inactive debtors**

This change applies only to independent and ACT government schools that integrate Fees, Billing & Payments with Xero.

To automatically archive the linked contact in Xero for inactive debtors:

- Go to **Setup Fees, Billing & Payments | Fees, Billing & Invoicing Settings**.
- Next to **Automatically archive Xero contacts for inactive Sentral debtors**, select **Yes**.

This setting will be set to No for all schools by default.

- If this option is set to Yes, the linked contact will be archived automatically in Xero if the Sentral debtor has no outstanding debit or credit balance, and all of their linked students have an enrolment status of Alumni or Withdrawn.
- If this option is set to No, debtors' linked contacts will never be archived automatically in Xero.

Flexible Classes

Improvement

- **Added the ability to unassign classes immediately after assigning to an Enrolment Pattern.**

Users are able to unassign classes from a current Enrolment Pattern if it is the same day that they assigned the class and no other action has been taken, such as marking a roll or setting up a Student Enrolment Pattern.

Flexible Classes | Enrolment Patterns | Assign Classes

Messaging

Issues resolved

- **Filtering students listed on the Messaging | Absence Notifications screen was not working properly, marking it difficult to locate certain students**

Students shown the SMS, Email and Portal sections for Absence Notifications functionality will now order alphabetically by surname

Plans

Issues resolved

- **Health Care plans were not printing details sections.**
- **New Victorian curriculum for Mathematics (VCAA 2.0) was not accessible via a student's Plan | Goals screen**

Student Profiles

Issues resolved

- **UI: An error occurred when attempting to display the Contacts & Other Details popup data for certain students**

Wellbeing

Issues resolved

- **Wellbeing nominations progress was not taking into account when the nomination had reset periods**
- **A memory error was occurring when trying to send too many emails at once in Wellbeing letters**
