

Version	23.3.1-ST
Release date	17/4/2023
noiouoo uuto	 Core: Users were unable to log in to Sentral using single sign on (SSO)
Version	23.3.2-ST
Release date	 Dashboard: A security vulnerability associated with the Portal login page was identified and remediated
Version	23.3.3-ST
Release date	21/4/2023
	 Wellbeing: Suspension data from Wellbeing to Scout was not syncing correctly, resulting in multiple entries for a suspension
	Applicable for NSW Department of Education (DoE) schools only
Version	23.3.4-ST
Release date	26/4/2023
	 Attendance: The Attendance Overview screen for a student was showing an incorrect attendance percentage
	Curriculum Reference: Improvements
	 Provided updates to subjects from the NSW Australian Curriculum – for Stages 4, 5, 5.2, 5.3, 5.4
	 Provided updated Competencies for VET subjects
	 Provided updates to subjects from the NSW Australian Curriculum – for Early Stage One to Stage Three
	 Added indicators for the new English and Mathematics subjects in the new Digital Curriculum – for Early Stage One to Stage Three
	 Added indicators for the new English and Mathematics subjects in the new Digital Curriculum – for Stages Four and Five
	 Added indicators for the new English and Mathematics subjects in the new Digital Curriculum – for Life Skills
	 Provided updates to subjects from the NSW Australian Curriculum - for Stage Six
Version	23.3.5-ST
Release date	26/4/2023
	 Improvement: Updated functions around automated provisioning of Life Skills GO Sentral module
Version	23.3.6-ST
Release date	27/4/2023
	 Attendance: Absence responses sent via the Portal could not be viewed in Attendance Notifications Responses
Version	23.3.7-ST
Release date	27/4/202
	 Attendance: Portal responses for absences were not appearing in Attendance Notifications Responses
Version	23.3.8-ST
Release date	2/5/2023
	Timetables: LISS GetClasses command would return an error

Academic Reports

Improvements

- Course Results List component: Added a configuration option to control whether a score of zero will be counted as unmarked when determining whether to print unmarked course results
- Updated the Grade Distribution report to allow course results to be grouped by schema as well as by subject

Issues resolved

Previous scores would display incorrectly when multiple subjects were linked to one schema

Academic Reports | [Reporting Period] | Export Data | Grade Results

• Reports: Course Results List component: The component would not respect the Use Decimal Values in Course Results setting

The component now displays decimal places in the mark.

• The My Comments screen could fail to load in cases where a large number of comments had been saved

My Comments now has pagination implemented to ensure comments can always be viewed successfully.

Admin enquiry

Issues resolved

• Search: Using Search Household to look for a father's surname did not get any results despite the father being on the system

The Households | Search Households function has been updated to search against a contact's first name and/or surname as some data sets received by Sentral do not directly correlate a contact as a mother or father.

Attendance

Improvements

• Added an edit timestamp to absence comments

When updating an absence comment, the timestamp will now be stored to allow for understanding of when a comment was modified and added.

Issues Resolved

- An error would display when generating grid roll sheets Attendance | Reports | Grid Roll Sheets
- Roll sheets reports could not be generated by year level for non-numeric year levels such as Kindergarten
- The Sickbay report would not generate data when filtering against options other than 'All Students'
- Double-clicking the Save button during processing of bulk absences would result in duplicate absences

School Attendance | Bulk Absences

- Setting students to absent in bulk would not apply correctly to the second period in cases where multi-period marking was in use
- An error would display when users tried to generate a Progress Report Attendance | Administration | Exports

Continuum Tracker

Issues resolved

• The Student Report PDF would incorrectly count clusters that had been deleted as 'Complete' when considering a student's highest completed cluster

Dashboard

Issues resolved

- **Portal Messages: Schools were not able to send portal messages for some activities** An activity can now only be selected if one or more students are added in the Attendance list. Activities without student attendance are not available for selection.
- Widget: Preview of certain videos included in the Staff Broadcasts widget would not display properly

Security Issue

• Sign In: Staff Sign In would sometimes produce an error when sign ins happened

Enrolments

Improvements

• Export: Added the SA based NAPLAN Student Enrolment export which is required in text format

Issues resolved

 Households: The error message warning that all households are marked as nonresidential was showing up when there were household/s already set to shared or residential

Enrolments | [Student Profile] | Associated Households

• Enrolment: An error message would sometimes display when users were trying to save a pending enrolment for a student

A relevant error message now displays when the Previous School Start and End dates are not populated with a valid date.

- Export: Adhoc export was not properly filtering out students who were no longer enrolled when using the 'Currently Enrolled Students Only' option
 Enrolments | Exports | Adhoc Export
- Enrolment: The Address Collection export was exporting Year 6 students as Secondary instead of Primary

Fees and Billing

New features

 Debtor Setup: Added ability to specify debtor types for exclusive portal invoices Setup Fees, Billing & Payments | Fees, Billing & Invoicing Settings

The existing setting has been renamed.

- The setting was called 'After publishing invoices to Portal only show invoices in Portal for debtor contacts that are linked to the Portal user accounts'
- The setting is now called 'Hide a debtor's invoices in the Parent Portal if the portal user is not linked to a debtor contact'.

The way this setting works has changed.

- The setting previously applied to all debtors.
- The setting now allows you to specify the debtor types to which it will apply.

For debtors of the selected types, invoices and payment requests will be hidden in the Parent Portal if the logged in portal user is not linked to one of the debtor contacts. This setting can be used to ensure that invoice details are only available to the appropriate portal users in split family situations.

To link a portal user to a debtor contact:

- Navigate to Registers | Debtors Register.
- Search for the debtor in the Debtors Register.

- Select the Setup Exclusive Portal Invoices button.

Issues resolved

• Parent Portal: Online payment would not update an activity notification

If a Portal user paid for an activity online, then selected the View Details button for the activity notification in their Home feed, the student was still shown as UNPAID. The details now update correctly to show the student as PAID.

Health

Issues resolved

 Incursions: Incursion Detail Types could be removed even though there were incursion entries already created with those detail types

System logic has been updated to ensure Sick Bay incursion detail types cannot be removed if they are currently in use.

Incursion detail types that are not in use can still be removed successfully.

The warning message that informs users why an incursion detail type cannot be removed has been updated.

Interviews

Issues resolved

 The booking confirmation email included information about joining a virtual meeting even though no online session was offered

The confirmation email no longer displays references to the online sessions and joining links if an online session is not selected in the interview setup.

 Selecting the hyperlink to modify an existing interview's unavailability record would display an incorrect staff name

Issue Tracking

Issues Resolved

• Report: The list of tasks on a printed report didn't match the list of tasks shown on the search results screen where the report was generated from

Kiosk

Issues resolved

- A layout display issue was adjusted in the visitor Kiosk section so that all menu items appear in a proper layout
- Kiosk slip printing was creating an incorrect second page without any content
- The on-screen keyboard was not displaying on the Kiosk Authorisation screen Users are now able to authorise Kiosk absence reasons using the onscreen keyboard.

Markbook

Issues resolved

The Import icon was missing when selecting the option from the Actions menu within a markbook

Messaging

• Responses: Users had to scroll horizontally excessively to get to the Save button if a message response contained a large amount of text

Text wrapping introduced into the display style for responses so that the Save button and other action elements remain on the screen without excessive scrolling if the response contains large amounts of text.

Plans

Issues resolved

• Signature lines would still print on Health Care Plan PDFs, even when the option had been disabled

- User interface: A broken plans user interface was shown for certain students when their Plan screen was loaded
- Plans generated as PDFs could allocate space incorrectly, leaving large gaps between sections when printed
- Attempting to print student plans in bulk would result in only the last selected student plan printing
- Plans with long or detailed sections would truncate when printed

Plans that fit this scenario can now be generated in landscape format to alleviate spacing issues.

Portal

Issues Resolved

- **Parents were unable to submit family amendment requests via Portal 2** This functionality has now been added in Portal 2.
- The list of continuous assessments published via the Portal was not displaying in chronological order

The list now displays in descending order with the most recently published assessments displayed first.

- Text displayed on the Portal Interview Booking screen viewed by parents was incorrect 'Click if Interview Not Required' text has been updated to 'Not required'.
- Students were unable to select an activity via the Portal
- Students can now select an activity as long as the activity has capacity to add more students.
- Viewing attachments from activity messages was not working properly

Portal Console

Issues resolved

- An incorrect message in the Portal Console indicated emails were sent successfully when no email in regards to family keys were sent
- The wording within Absence Notification Newsfeed referred to a link that was not present The label has been updated to: Your child ______ has been marked as absent on _____. Please click the link below (if provided) or access the Absences section to explain your child's absence.

The wording changes were made to achieve consistency in the portal message because absence notifications from Newsfeed do not contain a link.

- The Select All button on the Email Family Key list did not select all checkboxes Portal Console Setup | Parent Access | Family Keys | Email Family Keys
- Schools were unable to allocate unused keys to parents
- When attempting to send emails for Family Keys, a warning message about insufficient keys would display even though enough keys were generated

Portal Console Setup | Parent Access | Family Keys

Resource Booking

Issues resolved

• Bookings: Recurring bookings could be attached to the wrong periods in cases where the timetable's period structure differed across different school days

Sentral Setup

Issues resolved

- Attempting to delete a student photo could result in a 500 (white screen) error in cases where a school had a large number of photos uploaded and attached to students
- The information text on the Browse Photos screen for staff photographs incorrectly indicated that the user would be browsing student photographs
- Sentral Setup: District office phone was incorrectly set to be a required field

Staff Absences

Issues Resolved

• Absence: Attempting to create an absence for a selected staff member would result in a Timeview error and fail to add the staff member to the absence record

Student Profiles

Issues resolved

- Timeline: The Detentions label within the Wellbeing module when renamed (for example to Reflections) would display incorrectly in the Profiles module for detention related timeline entries
- Export: The Student Summary export had a reporting period dropdown which didn't work to control the attendance data being generated

The dropdowns between Reporting Period Data and Attendance Data have been separated so that it is now possible to select which calendar year to generate attendance data and reporting period data.

- Flag: Certain manual flags linked against students are shown duplicated
- Flags: Certain automatic flags were not being auto applied to students if the data associated with the particular flag was too large
- Assessment: The Student Assessments table would display all rows of data in a single row when it was meant to span multiple rows
- Export: The student's Export Summary didn't show any Academic data when the option to print academic data was selected
- Plans: The Plans list screen would fail to load if there was an old created plan where the created date was set to earlier than the term dates available on the system

Timetables

Issues resolved

- The display of a timetable Holiday would span beyond the number of table rows
- Bulk printing of student timetables would fail in cases where a multigrid timetable was in use

Visitors

Issues resolved

 In Kiosk, schools were able to incorrectly delete a user record while the visitor was checked-in.

Deletion without a valid check-out record has been blocked.

Wellbeing

Improvements

• Added the ability to view information about suspensions broken down by category on a student's Wellbeing screen

Individual category tallies have been added to the Summary section.

Issues resolved

- Creating incident records could intermittently result in a Sentral Exception error
- When exporting Wellbeing data from Profiles, data associated with inactive students could be incorrectly excluded
- Large or complex pinned reports could cause performance issues when loading the Wellbeing home page
- The name of the Detention Comment field would not update to match a custom name applied to 'Detentions' within Wellbeing
- A copied incident that was allocated to the same student as the original would not generate an automatic notification

Configuration has been added within the Notification Options section of Wellbeing setup to determine whether these incidents will generate automatic notifications.

• Headers for separate incident details would not display correctly in incident exports
